

## COVID-19 UPDATES

October 8th, 2020

For live updates on COVID-19 at the state level, county level and the Claremont neighborhood, you can check our [COVID-19 Claremont Graduate University Dashboard](#).

- **Global:** Total confirmed cases: 36,238,849. Total deaths: 1,057,505. Total recoveries: 25,277,578.
- **United States:** Total confirmed cases: 7,555,437. Total deaths: 211,917. Total recoveries: 2,999,895.
- **California:** Total confirmed cases: 831,225. Total deaths: 16,228.
  - Virus transmission in Los Angeles County is rated as widespread by **the governor's reopening regime**, which places LA county in Tier 1 and keeps higher education and K-12 schools closed. Schools are permitted to open to stable groups of no more than 12 students with disabilities, students requiring instruction for English as a second language and students needing other specialized in-school services. Many businesses and services are allowed to reopen if performed outdoors with modifications. ([Los Angeles Times](#))

### County-level statistics

**Table 1. County-level confirmed cases, deaths, and case-fatality rates.**

County	Confirmed Cases	Deaths	Case-fatality rate per 1,000	Total Population
Los Angeles	277445	6709	23.8	10,039,107
San Bernardino	56823	967	14.5	2,180,085
Orange	55042	1292	18.7	3,175,692
Ventura	13147	157	10.4	846,006
Riverside	61133	1247	18.9	2,470,546

Case-fatality rates may be biased due to undercounts in both cases and deaths

### LA County

- Total of 277445 cases across LA County, including 6709 deaths.
- For the previous 24 hours, 28 new deaths and 1589 new cases.

### Cities In Claremont's Neighborhood

Total number of cases: 12440

**Table 2. Confirmed cases in Claremont and neighboring cities**

City	Total Confirmed Cases	Total Population
Claremont	407	36,478
La Verne	511	32,206
Pomona	5702	152,361
Montclair	1316	39,437
Rancho Cucamonga	3017	177,751
Upland	1487	77,000

## Policy

- California has not seen a link between the reopening of K-12 schools for in-person learning and increased coronavirus transmission, the state's top public health official, Dr. Mark Ghaly, said Tuesday. It can take time for trends to emerge, but so far, the results are encouraging. ([KABC-TV](#))
- America's economic rebound might falter without further financial aid from the federal government, Fed Chair Jerome Powell warned Tuesday. Too little support would lead to a weak recovery, exacerbating existing inequalities, as reported by [CBS News](#). Meanwhile, President Trump halted negotiations for a new stimulus package until after the elections. ([CNN](#))
- The race for a COVID-19 vaccine slowed Tuesday, as the FDA released strengthened rules for authorizing any COVID-19 vaccine on an emergency basis. The co-chair of Operation Warp Speed, Moncef Slaoui, revealed that the government's vaccine fast-tracking effort has urged manufacturers not to apply for emergency use authorization until they have significant amounts of vaccines to deploy. This could push back even the first such authorization – expected to be for a vaccine being made by Pfizer and BioNTech, if it proves to be effective – into sometime in mid- to late November. ([STAT](#))
- Year 2020 is the least quantitatively productive year in the California Capitol since at least 1967, due to restrictions stemming from the pandemic. The California Senate Office of Research reports the California legislature passed fewer than 428 bills to the governor this fall. The crunched calendar and the state's gutted budget put a serious damper on legislators' bill-passing ambitions. ([CalMatters](#))
- The House of Representatives passed a \$2.2 trillion coronavirus relief bill last week in a 214-207 vote. The bill includes a second round of \$1,200 stimulus checks, \$600 weekly federal unemployment benefits, \$436 billion in new state and local aid, \$282 billion for education and childcare, and new money for the hard-hit airline and restaurant industries, among other provisions. Although the legislation is not expected to become law, it provides grounds for pre-electoral campaigning for incumbents from both parties. ([Forbes](#))

## Latest Research News

- A household survey of private households in the UK, excluding people living in care homes, other communal establishments and hospitals, shows that 76.5 percent who tested positive for SARS-CoV-2 reported no symptoms, and 86.1 percent reported none of the symptoms specific to COVID-19 such as cough, and/or fever, and/or loss of taste/smell. A more widespread testing program is necessary to capture "silent"

transmission and potentially prevent and reduce future outbreaks. ([Irene Petersen and Andrew Phillips Clinical Epidemiology](#))

- Results of a randomized trial assessing lopinavir-ritonavir treatment for COVID-19 show that this combination of antiviral drugs is not effective and not associated with reductions in 28-day mortality, duration of hospital stay, or risk of progressing to invasive mechanical ventilation or death. ([RECOVERY Collaborative Group The Lancet](#))
- A study of 509 hospitalized patients in Chicago, Illinois, shows that the most frequent neurologic manifestations of SARS-CoV-2 infection were myalgias, headaches, encephalopathy, and dizziness. Encephalopathy was associated with increased morbidity and mortality, independent of respiratory disease severity. Independent risk factors for developing any neurologic manifestation were severe COVID-19 and younger age. ([Eric M. Liotta et al. Annals of Clinical and Translational Neurology](#))
- Younger adults have likely contributed to community transmission of COVID-19 in summer. In June 2020, across Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee; Arkansas, Louisiana, New Mexico, Oklahoma, and Texas, increases in percentage of positive SARS-CoV-2 test results among adults aged 20-39 years preceded increases among those aged over 60 years by four to 15 days. Nationwide, the median age of COVID-19 cases declined from 46 years in May to 37 years in July and 38 in August. ([Tegan K. Boehmer et al. CDC Morbidity and Mortality Weekly Report](#))
- COVID-19 can spread on airline flights. In-flight transmission that probably originated from one symptomatic passenger caused a large cluster of cases during a long flight, a study finds. Guidelines for preventing SARS-CoV-2 infection among air passengers should consider individual passengers' risk for infection, the number of passengers traveling, and flight duration. ([Nguyen Cong Khanh et al. CDC Emerging Infectious Diseases](#))
- A genetic association study of 3,199 patients identified a gene cluster on chromosome 3 as a major genetic risk locus for severe SARS-CoV-2 infection, hospitalization and respiratory failure. The risk is conferred by a genomic segment of ~50 kb that is inherited from Neanderthals and is carried by about 50 percent of people in South Asia and about 16 percent of people in Europe today. ([Hugo Zeberg and Svante Pääbo Nature](#))
